TO WHOM SO EVER IT MAY CONCERN

The Energy and Sustainability Services of Jones Lang LaSalle has facilitated installation of the Articmaster at a number of buildings and facilities on Chiller Systems of different capacities. Each installation was preceded by trials based on a comprehensive M&V process. Each installation has resulted in KWH savings on Compressor energy consumption that has varied between 15 to 25% with no recorded adverse impact on the operating parameters of the systems.

We believe that the Articmaster represents a proven and significant potential for savings in Energy Consumption of Airconditioning plants. Consequently, it contributes effectively in reducing the overall carbon footprint of building operations.

The ESS team have been recommending the installation of the Articmaster as an Energy Conservation measure wherever feasible through our Energy Assessment / Audit reports.

Yours sincerely,
Rajat Malhotra
Chief Operating Officer - West Asia
Integrated Facilities Management
